

Milestone 2

Abreham Temesgen

March 2022

Milestone

These were what I had planned for the first milestone.

1. There is a new drawing page for artists and the user can make a new drawing using the in app drawing tool and save it.
 - The users can add simple shapes and choose their color but I need to make it work for any shape with a stylus option.
2. The user profile has a display for each art piece they own.
 - I made the user profile page but I need to finish the previous step before moving on to saving and displaying images.
3. There is an auction option for saved drawings and a tool to select bidders or randomly from the set of mock users. I think i can finish this over the weekend.
 - I have a mock auction option on the front page for a single piece of art. after I get the canvas working right I can make this work for any image.
4. Users can use AR to move the drawings into their real spaces
 - I am waiting on an iPhone that I can use before implementing this step.
