

Milestone 2

Abreham Temesgen

March 2022

Milestone

These were what I had planned for the first milestone.

1. There is a new drawing page for artists and the user can make a new drawing using the in app drawing tool and save it.
 - The users can add simple shapes and choose their color but I need to make it work for any shape with a stylus option.
2. The user profile has a display for each art piece they own.
 - I am still working on the user profile page because of scheduling issues during spring break I think I can move this to the next milestone
3. There is an auction option for saved drawings and a tool to select bidders or randomly from the set of mock users.
 - I have an idea of how to do this but again I wasn't able to implement this step because of scheduling issues.
4. Users can use AR to move the drawings into their real spaces
 - I am waiting on an iphone that I can use before implementing this step.
