# Milestone 3

Abreham Temesgen

April 2022

## Milestone

These were what I had planned for the third milestone.

1. There is an auction page that allows a user to choose a bid option, and a secondary page for losers who bid at 50% or more of their worth that gives them the option to select from a list of closed auctions with no bids.

    - I have the auction page working but I am busy with other parts of the project so i left the secondary page out of this milestone.

2. There is a users page with mock users that includes a list of the mock users and some snippet of their profile and their winnings.

    - I have a users page with the details of each user view-able

3. You should be able to sort users by name, worth, or number of winnings on users page.

    - You can sort the users by name.

4. Artists can upload audio or create it in app.

    - I am leaving this off this milestone because its not quite as important as getting everything working properly

5. There is a chat option on the auction page.

    - there is a chat area under the bidding area but I haven't gotten multiple users logged in at the same time so the chats aren't persisted.

6. Multiple users can be logged in at the same time.

    - Not quite finished on this but I am working on getting fire base to work for users.

7. Users can share their art using AR as a virtual gallery

    - I have an iphone to test with but I am first experimenting with a test app built with ar-kit already enabled.
