Milestone 1

Abreham Temesgen

March 2022

Milestone

These were what I had planned for the first milestone.

1. There is a homepage for new users with the option to create your profile page or sign in and a saved set of mock users.

   - I was able to set up a new user page with the basics of the avatar creation.
   - The users are of the custom class User and include the username, password and the image of their avatar. I also made an environment object that stored a list of created users.

2. A new user can make their profile page including using the avatar creation tool. The user will have cash and an empty list of art they own (names only).

   - I was able to set up the avatar creation page and the user can select the face-shape, eyes, nose, mouth and eyebrows of their avatar.
   - I wasn't able to incorporate the cash system but it shouldn't take too long, its just a new property on the user.
